

# Measuring Incrementality of Perks Program on Subscription Churn

latentview

Actionable Insights • Accurate Decisions

## Client

Leading Gaming Company

## The Problem

Timeline of Perks getting added to Perks catalogue was non-linear, and the client had no way of measuring incremental impacts of Perks program on Subscription Churn.

## The Before State

**A gaming subscription service** provides 100+ titles to play and added membership benefits such as discounts on Games / Add-Ons and **Perks** - value-added benefit providing free Add-Ons, Bundles, Non-Game 3rd party offers.

Objective of the study is to measure the incremental impact of redeeming perks on reducing subscription churn. Previously, there were no studies that give any evidence on incremental lift for Perks program which is highly complex in a non-experimental setup.

## The LatentView Solution

Measured the incremental impact of Perks redemption on churn using clustering algorithm (Unsupervised Machine Learning).

Identified user segments such as Light-Engaged, Heavy-Engaged, Console-Intensive and PC-Intensive and the implication of churn for perks redeemers and non-redeemers.

Developed a quasi-control framework to measure the incrementality of Perks program accounting for product/business confounders.

## The After State

ML based approach helps in measuring incrementality in a **non-experimental** setup and the segmentation results in synthetic look-alikes to be able to estimate more accurately.

-----

Perk-redeemers were churning **3% less (statistically significant) compared to the non-redeemers.**

-----

Measuring incrementality helps business to improve the productivity of the Perks program and supplements the decisions on continuation and potential expansion of the Perks program.

### About: LatentView Analytics

LatentView Analytics is a leading global data and analytics service provider helping companies turn data into actionable insights to gain competitive advantage. As a trusted analytics partner to the world's most recognized brands, LatentView solutions provide a 360-degree view of the digital consumer, fuel machine learning capabilities and support artificial intelligence initiatives. LatentView's success is driven by a commitment to deliver unrivalled analytics solutions that enable Fortune 500 companies in the retail, CPG, BFSI, high tech, healthcare and other sectors to predict new revenue streams, anticipate product trends, improve customer retention, optimize investment decisions and turn unstructured data into a valuable business asset. LatentView has offices in Princeton, N.J., San Jose, Calif., London, Singapore and Chennai, India with more than 700 employees globally.
